

	2, LEBUH ACHEH, GEORGE TOWN 10300 GEORGE TOWN PULAU PINANG MINI PROJECT	
PROGRAM'S CODE & NAME	J620-002-4:2020 FRONT-END SOFTWARE DEVELOPMENT	
LEVEL	FOUR (4)	
COMPETENCY UNIT NO. AND TITLE	J620-002-4:2020-C01: FRONT-END SOFTWARE DEVELOPMENT	
WORK ACTIVITIES NO. AND STATEMENT	1. CREATE WEB DESIGN MOCK-UP ELEMENTS. 2. PLAN WEB DESIGN STRUCTURE. 3. TRANSFORM MOCK-UP TO RESPONSIVE WEB PAGES. 4. VERIFY DEVELOPED RESPONSIVE WEBSITE. 5. VERIFY WEBSITE ACCESSIBLE GLOBALLY.	
CODE NO.	J620-002-4:2020-C01/PR(1/1)	Page: 1 of 10
CANDIDATES NAME		
NRIC NUMBER		

SECTION A:

TITLE: BUILD A PHP + MySQL Application

A. TASK: The goal of this project is to create a fully functional application using HTML, CSS, PHP, and MySQL. The application should have a user authentication system with at least three different roles and a role-based access system, where different roles have different levels of access to the application's features. The applications should have a routing system and a data management system, and the database should contain at least four tables with at least three linkages between them.

B. INSTRUCTIONS:

1. Develop an application using HTML, CSS, PHP, and MySQL.
2. Design a MySQL database with at least four tables, with at least three linkages between them.
3. Implement a user authentication system with at least three different roles.
4. Incorporate a role-based access system.

C. ASSESSMENT CRITERIA

The candidate's performance will be assessed according to the following criteria:

1. Critical task:

- a. Develop an application using HTML, CSS, PHP, and MySQL.
- b. Design a MySQL database with at least four tables, with at least three linkages between them.
- c. Implement a user authentication system with at least two different roles.
- d. Incorporate a role-based access system.
- e. Implement a data management system.

2. Task Process:

- a. **Use Case & Flowchart:** Illustrate the user journey and the flow of data within the application using use cases and flowcharts.
- b. **Code Quality:** Write clean, readable, and maintainable PHP and MySQL code that adheres to standard coding conventions. Your code will be evaluated on:
 - i. Readability
 - ii. Cleanliness and maintainability
 - iii. Adherence to coding standards, such as the DRY (Don't Repeat Yourself) principle.
- c. **User Experience:** Design a user flow that makes sense and provides a smooth and intuitive user experience.

3. Task Outcome:

- a. **Presentation:** Your presentation skills will be assessed based on how well you present your work, explain your design choices, and communicate the purpose of your application.

4. Attitude/Safety/Environment

- a. Submit a project or assignment on time.
- b. Attend project or assignment briefings.

Performance Assessment Scheme:

Name of Candidate:		No. IC:	
Start Time:	End Time:	Date:	
Marking scale: 0=Underperform/Wrong; 1=Unsatisfactory ; 2=Satisfactory ; 3=Above Expectation Marking Calculation: % The weighting will be determined by the expert who developed the question			
Sec tion	ASSESSMENT CRITERIA	MARKS	
1.	Critical Task (50%)	Mark a (/) on the acceptable and non-acceptable on the following critical task.	
		Acceptable	Non-acceptable
	1.1 Develop an application using HTML, CSS, PHP, and MySQL.		
	1.2 Design a MySQL database with at least four tables, with at least three linkages between them.		
	1.3 Implement a user authentication system with at least two different roles.		
	1.4 Incorporate a role-based access system.		
	1.5 Implement a data management system.		
	(*Critical criteria: 50 marks will be given if the above criteria task was performed. 0 mark will be given if there is any of the criteria tasks were not carried out.)		
	Marks obtained (%)		50
2.	Task Process (30%)	%	Marks

		Weightage	
	2.1 Code Quality		
i.	Code at this level is impeccably organized, adhering strictly to best practices for HTML, CSS, PHP, and MySQL. The code is highly readable and clean, facilitating maintainability. It embodies principles like DRY (Don't Repeat Yourself) and shows advanced techniques, demonstrating mastery of the languages. Comments are purposefully used to clarify complex procedures. The code is entirely free of errors and warnings.	3	20%
ii.	Code at this level indicates a strong understanding of HTML, CSS, PHP, and MySQL. The code is largely readable, clean, and follows common best practices. It may have occasional redundancy, but generally respects the DRY principle. Comments are present but may not fully clarify the functionality. Minor errors or warnings may be present, but they do not significantly impede the application's functionality.	2	
iii.	Code at this level is satisfactory but shows room for improvement. HTML, CSS, PHP, and MySQL basics are present, but advanced techniques are lacking. The code might lack consistency in cleanliness and may not fully adhere to the DRY principle. Comments are sparse, leaving some portions of the code difficult to understand. Errors or warnings may be present that slightly impact the application's functionality.	1	
iv.	Code at this level demonstrates a lack of understanding or application of basic principles of HTML, CSS, PHP, and MySQL. The code is hard to read and may be messy, making maintenance difficult. Comments are either misused or absent, leading to unclear portions of code. There are numerous errors or warnings that	0	

	significantly impact the functionality of the application. The DRY principle is ignored, resulting in repeated and unnecessary code.			
2.2 Use Case & Flowchart				
i.	Use cases and flowcharts are meticulously designed and perfectly represent the user journey and data flow within the application. They are clear, concise, and comprehensive, illustrating all major processes and interactions in the system. Diagrams are well-structured and neatly presented, and all symbols used adhere to standard conventions.	3	3%	
ii.	Use cases and flowcharts at this level generally represent the user journey and data flow within the application. They cover most major processes and interactions, but some minor elements may be missing or unclear. Diagrams are adequately structured and generally adhere to standard conventions, though there might be some minor inconsistencies.	2		
iii.	Use cases and flowcharts at this level vaguely represent the user journey and data flow within the application. They capture some processes and interactions, but significant elements are missing or unclear. Diagrams may lack structure, and symbol usage may not consistently adhere to standard conventions.	1		
iv.	Use cases and flowcharts fail to accurately represent the user journey and data flow within the application. They are missing key processes and interactions. Diagrams are poorly structured, and the symbols used do not adhere to standard conventions. They lack clarity, rendering them ineffective as planning or communication tools.	0		
2.2 User Experience				

CODE NO.	J620-002-4:2020-C01/PR(1/1)	PAGE: 7 of 10
-----------------	-----------------------------	----------------------

	i. The user flow is exceptionally designed and makes perfect sense. It is straightforward, and logical, and prioritizes user needs, ensuring a seamless and intuitive experience. Each page serves a clear purpose and transitions between pages are smooth and meaningful. The design demonstrates a deep understanding of user needs and behaviors.	3	7%	
	ii. The user flow is well-designed and generally intuitive. It mostly aligns with user needs and expectations, resulting in a generally smooth user experience. Most pages serve a clear purpose, and transitions between pages are usually meaningful, though there may be minor inconsistencies. The design shows a good understanding of user needs and behaviors.	2		
	iii. The user flow has some flaws, making it somewhat difficult for users to navigate the application. The design partially aligns with user needs and expectations, and the user experience is inconsistent. Some pages may serve unclear purposes, and transitions between pages may be confusing at times. The design shows a basic understanding of user needs and behaviors.	1		
	iv. The user flow is poorly designed, making it challenging for users to navigate the application. The design fails to meet user needs and expectations, leading to a poor user experience. Pages serve unclear purposes, and transitions between pages are often confusing. The design demonstrates a lack of understanding of user needs and behaviors.	0		
	Marks obtained (%)			
3.	Task Outcome (15%)			

3.1 Presentation				
	i. The presentation is exceptional. The presenter articulates the purpose of the application clearly, convincingly justifies design choices, and thoroughly explains the functionality. Slides (if used) are well-designed, coherent, and engaging. The presenter engages the audience, maintaining interest throughout, and answers questions confidently and accurately.	3	15%	
	ii. The presentation is generally good. The presenter explains the purpose of the application and most design choices, though some explanations may lack depth. The functionality is mostly explained, but some elements may not be clear. Slides (if used) are fairly well-designed and somewhat engaging. The presenter tries to engage the audience, though there may be lapses in interest. Questions are answered, though not always with confidence or accuracy.	2		
	iii. The presentation has some flaws. The presenter attempts to explain the purpose of the application and design choices, but explanations lack clarity or conviction. Some functionality is explained, but significant elements are unclear or omitted. Slides (if used) may be cluttered or confusing. The presenter struggles to engage the audience, and answers to questions lack confidence or accuracy.	1		
	iv. The presentation is poor. The presenter fails to clearly explain the purpose of the application and does not justify design choices. The functionality is not adequately explained. Slides (if used) are poorly designed and fail to engage the audience. The presenter does not maintain audience interest, and answers to questions are inaccurate or misleading.	0		

	Marks obtained (%)			
4.	Attitude/ Safety/ Environment (5%)			
	4.1 Project Submission			
	i. The project or assignment is submitted well ahead of the deadline, demonstrating exceptional time management and planning skills	3	3%	
	ii. The project or assignment is submitted on time, meeting the deadline and demonstrating satisfactory time management and planning skills	2		
	iii. The project or assignment is submitted slightly late (24 hours after the deadline), missing the deadline, and demonstrating unsatisfactory time management and planning skills.	1		
	iv. The project or assignment is submitted significantly late or not submitted at all, demonstrating a lack of time management and planning skills.	0		
	4.2 Attendend on project or assignment briefing			
	i. Attends the entire project or assignment briefing, actively engages by asking relevant questions, and demonstrates an exceptional understanding of the project requirements and expectations	3	2%	
	ii. Attends the entire project or assignment briefing, listens attentively, and demonstrates a satisfactory understanding of the project requirements and expectations.	2		
	iii. Attends only a portion of the project or assignment briefing or is inattentive during the briefing, demonstrating an unsatisfactory understanding of the project requirements and expectations.	1		
	iv. Does not attend the project or assignment briefing, demonstrating a lack of commitment and understanding of the	0
